

CYBERSECURITY MANAGEMENT MATURITY & COMPLIANCE (CMMC)

THE CMMC IS COMING IN FALL 2020. USE THIS TIME TO YOUR ADVANTAGE BY PREPARING FOR YOUR AUDIT WITH INTUITIVE CYBERSECURITY PLANNING AND MANAGEMENT SOFTWARE.

Understand your network: The NIST MEP 162 self-assessment questions have been built into the program, with 5 multiple choice answer options and free space. Automatically produce a Security Assessment Report from the tool. Roll these answers over to the implementation and system security planning area.

Assess your NIST 800-171 controls: The software guides you through each of the NIST 800-171 controls so that you can record your implementation status for each of the 110 controls. Implementation statuses are calculated in real-time. You can generate an automated system security plans (SSP) with just one click.

Preview your CMMC standing across all levels: CMMC version 1.02 has been pre-loaded into the software, with links to the associated controls. You will be able to assess your implementation status for each practice and all of the processes. Practices roll up within levels, across capabilities, and within domains. Quickly visualize your status for each practice, within all 5 levels, and across capabilities and domains.

Visualize your system's control status in one location: Our easy-to-read, mathematically precise scoring lays out your implementation across each NIST 800-171 control, and with each of the CMMC practices and processes. You will quickly be able to see which controls and practices are deficient, enabling you to quickly self-score your CMMC level. Identify which controls and practices are deficient and need improvement plans.

Plan to resolve your deficiencies: Our interactive POA&M enables you to quickly build a POA&M. Build one standardized header for a network. Simply click to open a planning cell for an identified weakness, and you will be able to build a complete plan, with associated milestones and corresponding dates, in one standardized format. Add as many improvement plans as necessary. Run the POA&M with just one click.

Manage your plans to successful outcomes: The POA&M template links to a governance calendar so that milestones and completion dates can be tracked in one location. The POA&M template allows you to assign individual points of contact for each milestone and planned improvement.

Multitenancy enables you to manage consulting clients and/or supply chain: The software enables you to create separate folders for each client, or each member of your supply chain, under your license. Use this to manage assessment work, different networks, or the cybersecurity of your company's supply chain.

Measure progress over time through multisystem versioning: The software allows you to create multiple assessments inside a portfolio. By keeping one document live and archiving previous assessments, you'll be able to compare progress towards the target state over time. Visual dashboards enable quick comparisons.
